

# A complete stack of Storage Courses offered by TLC

*Skills & expertise to help you increase your knowledge in the field of Storage technologies*

Remember data is the only entity that cannot be reproduced or get insured in the event of data corruption or complete data loss.

Remember that technology is just part of the cost equation. Consider how much effort will be required to run and manage the storage or any extra effort end-users may have to put in to make it work

## Overview

Data Storage Strategy is the long-term direction for storing and managing information. Remember, all data is not created equal and understanding the business value of data is critical for defining the storage strategy. Moreover, buying leading-edge storage products is not always the best option for most businesses, but make sure you do not get caught out as your needs expand or technology.

Businesses need to be aware of technology directions therefore, a data storage strategy should be based on sound capacity planning procedures and a good knowledge of business guidelines. Storage product that leaves a business locked to a particular supplier should be avoided plus much more that we shall be covering in this session.

TLC offerings is based on 6 storage courses. Customers can select any of these courses for their employes and we will impart these courses at their given date and time subject to a minimum of seven paid registrations.

## About this program

TLC is pleased to announce a stack of eight unique vendor neutral face-to-face and online technology workshops as a part of their education and training services program. All of these courses can also be delivered in a private mode for a particular customer online or at their premises.

These workshops shall be delivered by an experienced trainers with 25+ years of career experience imparting education and training services both locally and internationally for IBM, GBM, Si3 and TLC customers. In terms of career, our trainer have served international enterprise technology vendors including IBM, Fujitsu, and ICL and a national organization Si3.

Our trainer holds various industry professional certifications in the space of Enterprise Architecture, Enterprise Servers & Storage technologies, ITIL, Information Security, Cloud Architecture, Virtualization, Green IT, Business Resilience and a co-author of 10 IBM  Redbooks in the area of IBM AIX operating system and Power Server technologies.

Our workshops are vendor neutral which makes the attendee completely familiar with new technologies surrounding emerging and complex business issues targeting security. The idea is to build customers resources with skills so that they can understand, design & develop their technology solutions without much depending upon their vendors support.

This online program offers a unique flexibility where customers can choose from a variety of workshops at their premises at affordable cost. We can deliver these workshops in a private format, allowing you eliminating travel and hotel expenses and providing greater flexibility since you are in a position to choose your own dates, your time and the place.

## A Series of 6 Storage Technology Workshops

- Core Fundamentals of Storage Area Network – [TN165](#)
- Cloud Storage – The New Paradigm for Storage Technologies – [TN167](#)
- Understanding the Role of Storage Technologies and Big Data – [TN170](#)
- Information Storage Strategies – [TN186](#)
- Information Storage Strategies and Solution – [TN187](#)
- The Core Fundamentals of SAN Zoning – [TN584](#)
